**Company Size**

51 - 200 Employees

### COMPANY OVERVIEW

PT. Fuboru Indonesia was established in 1983, which means this company has existed for more than 20 years in the automotive parts industry. It is true that we are the pioneer in cutting gasket industry in Indonesia. At that time, only high price original parts were available. Currently our product range covers

automotive parts for motorcycles and automobiles and also static engine parts. Continuous development has been done to reach our vision becoming biggest 10 in national level automotive parts manufacturer, while our mission is always to give the best services to all customer including internal and external. Product quality improvement always been achieved through innovation and technological development, because for us, quality is our priority. In order to assure product quality, we do in process control, from raw material selection, manufacturing process control, and finally finished goods storage. We do all this for customer satisfaction because we always want to produce the best. Nowadays many kind of parts are available in the market. We hope that customers can differentiate which is a quality part and which is not. Fake parts which are not of good quality result in loss to the customers and vehicle owners, because those parts can not be claimed and have unclear identity and unknown manufacturer address. While on other side, we always want to communicate with our customers. On every one of our products label is clearly visible with our complete address, fax number, email address, and tollfree number. Our customers can easily contact us with complaints and give us input through our available channels. To face the challenge of globalisation and the e-business era, we have researched intensely in a number of fields, especially in engine improvement and breaking systems. The results has been registered to local and world wide patents including The United States, Canada, Australia, Europe, Singapore, Taiwan, Korea. These world wide patents give us law protection of intellectual properties, so within a certain time range, we are the only company who has the rights to produce and distribute our invention. In order to give the best service to vehicle owners, we have set up FMC (Fuboru Mechanic Club). FMC members are mechanics that work as the vehicle 'doctor'. Several FMC activities are as follows: technology information, mechanic gathering to

improve mechanics abilities and knowledge. With the motto: become professional with us, we hope mechanics are really expert because of their profession, not only because of their everyday activities. We would like to take this opportunity to say many thanks to our customers that along the years have trusted and used our products. Our success is because of your cooperation.

### Product & Services

The Gasket is a material or combination of materials located between two separated parts, which is attached mechanically. It's function is to prevent leakage of mechanical attachments within a certain time range. SKO rubber parts are made with controlled processing and are based on an accepted quality standard. The Seal Valve Stems function is to prevent oil leakage in the combustion chamber. SVS NICHII is made of a material which is heat resistant and oil / additive resistant, and resistant to valve friction. The FUBORU Gasket Adhesive is a special adhesive to bond the gasket. FUBORU Gasket Adhesive is made from elastomer with micronized aluminum, it is able to fill a scratch on an engine surface.
